

TRACED your equipment

■ Securing goods

Traceability is essential to fight against theft, fraud or the illicit exchange of goods. the application of **a mark of recognition** on the product that is impossible to forge is the only way to **totally protect the part.** ■

■ Asset management

The identification of the goods is done **clearly and directly** on the product, with no errors, in order to trace the item **from purchase through maintenance until disposal** ■

■ The maintenance of equipment

Labels which contain safety data do not resist well to harsh environments (cleaning, heat...). In order to protect **essential information, indelible marking** is necessary. ■

■ Inventory control

Controlling the flow of goods is possible thanks to the **unique identification and inventory** of your stock in a **traceable system. The item is identified with a permanent process.** ■
